

The Journal of Molecular Diagnostics

Official Journal of the Association for Molecular Pathology

July 2007 • Volume 9, Number 3

On the Cover: Indirect layered peptide array (iLPA) enables multiplex measurement of proteins on a solid surface, such as target antigens on a tissue section. Shown are a Sjögren's syndrome sample and a tissue microarray (TMA) analyzed by an iLPA capable of measuring seven analytes; a prototype software system allows alignment and visualization of the results. See page 297.
